1. Optimization advice

A. General page properties

Page URL

1. **Your keyword isn't present in the URL!** Our research of hundreds of search engines top-lists shows that keyword presence in the URL is crucial for achieving high rankings in a search engine's results list. By placing keywords in your domain name, you gain a serious advantage with search engines. If your URL points to an already established and high-ranked web page, we do not recommend altering it. However, this factor is worth considering when you create new pages / sites. Most major search engines favor websites with keywords in their URL; however, remember to use them sensibly and not to abuse them. When optimizing a page for a key phrase, separate keywords in the URL with a hyphen (domain/web-site.html) or an underscore (domain/web_site.html), but do not write them as one word. Otherwise, search engines will understand it as a single word (even if the search engine result highlights this keyword in bold), and your work on URL optimization will be wasted.

B. Main on-the-page factors influencing your ranking

1. <HEAD> area:

<TITLE> tag

1. **Your Title tag is not the first tag in the <HEAD> area of your page!** Your Title tag should be placed before all other tags, otherwise search engines may overlook it which will significantly damage your rankings.

META Keywords

1. **Your keyword weight in the META Keywords is too low!** When it comes to this tag, the higher the keyword weight, the better. Meanwhile, on your page, keyword weight doesn't come to more than 33.3%. Try to remove the least informative and least relevant keywords, thus increasing keyword weight.

2. <BODY> area:

Visible text

1. **Your keyword doesn't have enough weight on your page!** Your keyword should constitute at least 2 percent, while with your page it is only 1.1%. Increase the keyword weight so its value ranges within the boundaries of 2-10 percent. Also keep in mind the possibility of using different forms of your keywords. While ranking, search engines consider not only direct matches of keywords, but also their various alterations. For instance, for the query "web hosting," search engines will take into account the occurrences of such words as "host", "hosting", "webhosts" etc. on your pages. In addition, the modification of your keyword makes the content more user-friendly, so your page doesn't look like a readability puzzle stuffed with one and the same keyphrase. And remember: a good technique for writing page copy is to write naturally.

ALT image attributes

1. **Your keyword is not present in the first 3 ALT image attributes on your page (or there are no ALT attributes at all)!** If you have images on your page, put the keyword in one of these ALTs as they are considered more important than the rest of the ALTs on your page. Even though ALT tags haven't gained much importance with Google, the Yahoo! and Windows Live search engines pay much more attention to them.

2. **Your keyword frequency in ALT image attributes is too low!** Your keyword should appear 1 to 3 times in ALTs on this page while it is found 0 time(s). You can easily adjust this number with your favorite HTML editor.

2. Advanced analysis

A. General page properties

Page:	/
HTML size (Kb)	44.0
Last modified	Not detected.
Has same color text and background	No
Has tiny text	No
Has immediate keyword repeats	No
Uses controls	Yes
Uses frames	No
Uses external JavaScript	Yes
Uses internal JavaScript	Yes
Uses external VBScript	No
Uses internal VBScript	No
File robots.txt disallows spidering	No
Page URL	
Keyword as a part of URL (domain, folder and page name)	No
Keyword as a separate part of URL (domain, folder and page name)	No

B. Main on-the-page factors influencing your ranking

1. <HEAD> area:

<TITLE> tag	...
Number of Titles	1
First tag in the <HEAD> tag	No
Characters in Title	28
Words in Title	4
Stop words in Title	No
Keyword frequency in Title	1
Keyword prominence in Title	100.0%
Keyword weight in Title	75.0%
META Description	...
Number of META Description tags	1
